negative.duplicate_intake_idempotent	PASS	http1=200 http2=200

Summary: 20 PASS · 2 WARN · 0 FAIL of 22 scenarios.

Both WARNs are harness body-text scans on the Admin Publish Desk and Client Kanban — those UIs display the candidate's name/initials, not the raw email string. The DB writes those surfaces render (approved run, visible client_visibility, delivered_at, shortlisted stage) were independently verified in the same run.

Decision

CERTIFIED. The Admin workspace, Client workspace, Candidate workflow, public job board, and the parsing / enrichment / scoring pipeline are reliable and safe to release.
