

TaaSFlow V2 — Final Platform Excellence Certification

Trace: FINAL-CERT-2026-07-22

Date: 2026-07-22

Environment: Supabase nfwetiyrxsrejdodvale · Published
<https://clear-path-hubs.lovable.app>

Verdict

TAASFLOW_V2_EXCELLENCE_NOT_CERTIFIED

Excellence certification requires the full 9-persona live matrix, every-button audit, KPI reconciliation, and all 18 negative scenarios to be re-executed against real canonical records in a single verified pass, with zero privileged-access regressions. Two of those preconditions are not met.

What was verified this turn

Database invariants — PASS

Invariant	Result
Publication gate (visible without approved score)	**0**
Scoring identity mismatches (position/app/candidate/org/submission)	**0**
Scoring math violations (<code>`final ≤ cap AND final ≤ raw`</code>)	**0**
Audit events recorded	**599**

Public route smoke — PASS

/, /solutions, /how-it-works, /intake, /jobs, /contact, /login → 200
/auth → 307 (expected pre-auth redirect)

Blocking findings

F-01 · CRITICAL · Privileged access regression

Active platform_admin memberships = 2. The PRIV-RECON-2026-07-22 reconciliation designated kasprzakjoao@taasflow.com as the single canonical Master Admin and revoked 8 obsolete rows; a second platform_admin row has since regressed. The is_master_admin unique index still enforces one Master Admin, but the role-membership count violates the reconciled state.

Remediation: identify the second active platform_admin, decide whether to promote-to-operations or revoke, record the trace.

F-02 · HIGH · Pipeline fan-out insufficient for certification

State Count
--- ---
Scored 6
Manual review required 83
Failed 5
Total 99

Only 6 of 99 matches surface to Clients. The Client Journey (opens position → reviews candidate → shortlists → interview) cannot be certified at platform-excellence breadth against 6 candidates. Root cause is seed data lacking current_cv_file_id, already documented in the PIPE-RECON-2026-07-22 report; not repaired this turn.

F-03 · HIGH · Live matrix not re-executed

The spec requires end-to-end execution of:

- 9 personas × 5 journeys
- Every route, button, KPI, filter, drawer, modal, action menu
- 18 negative scenarios (duplicate intake, wrong tenant, viewer mutation, corrupt CV, OCR failure, parser failure, enrichment failure, empty evidence, wrong-role score, expired file URL, stale session, deactivated user, offline mutation, backend timeout, ...)
- Refresh persistence, mobile layouts, keyboard nav, a11y, console, network, DB postconditions, audit events

This turn re-verified DB invariants and public route reachability only. Prior turns cover portions of this matrix (auth cert, intake cert, application cert, scoring cert, sync cert, perf & a11y cert), but the requested single-pass re-execution against current canonical records has not been performed.

F-04 · MEDIUM · Auth completeness gaps carry over

The AUTH-CERT-2026-07-22 report classified invitation flow and onboarding routes as missing and issued a conditional FAIL on the auth surface. No repair recorded since; deactivated-user negative test remains unverified.

What already passes (from standing certifications)

Area	Trace	Verdict
Intake (5-step, idempotent, org/membership/position/audit)	premium intake spec	PASS
Job board & application (duplicate prevention, canonical postconditions)	premium apply spec	PASS
Scoring identity, math, immutability, publication gate	scoring cert	PASS
Admin, Client, Candidate workspaces	premium workspace specs	PASS
Synchronization, realtime, KPI reconciliation	SYNC-RECON-2026-07-22	PASS
Public website & brand migration	website migration	PASS
Performance & accessibility polish	perf-a11y cert	PASS
Support-view read-only enforcement	SUPPORT-VIEW spec	PASS

Required totals (spec)

Metric	Target	Actual
Broken required routes	0	0
Dead required buttons	0	unverified this turn
Misleading controls	0	unverified this turn
UI-only mutations	0	0
Wrong-entity actions	0	unverified this turn
Valid intake failures	0	0
Valid application failures	0	0
Scoring identity errors	0	**0**
Scoring math errors	0	**0**
Client Preview mismatches	0	0
KPI mismatches	0	unverified this turn
Kanban persistence failures	0	unverified this turn
Cross-tenant leaks	0	unverified this turn
Critical a11y failures	0	0
Serious a11y failures	0	0
Unhandled console errors	0	0
Production build failures	0	0

| Blocked critical tests | 0 | **7** (persona + negative-suite reruns) |

Path to certification

1. Reconcile privileged access to exactly one active platform_admin and record the trace.
2. Repair pipeline fan-out: attach CV files or triage the 83 manual-review matches so $\geq 60\%$ of the sample is scored.
3. Execute the full live matrix (9 personas, every route/control, 18 negative scenarios) in one uninterrupted certification pass with Playwright evidence per persona.
4. Close the two open auth gaps (invitation flow, deactivated-user negative test).

Re-run this certification once (1)–(4) are complete.
